

MURC 3302

RO pH Booster

MURC 3302

Is a synergistic blend of neutralizing amines that will neutralize carbonic acid and other mineral acid and boost alkalinity and pH without increasing TDS, Normally the boiler feed water pH should be at 8.5-9.5 for avoiding boiler tubes corrosion or rusting due to acidic attack.

CORROSION REDUCTION

MURC 3302 is an strong alkaline liquid formulation designed to increase alkalinity of feed water of boiler. It is also used to reduce corrosion of feed water tank, lines & pump.

MULTIPURPOSE EFFECT

MURC 3302 RO pH booster or alkalinity builder is a multipurpose Boiler Water Treatment Chemical that increases that alkalinity and pH of boiler water for corrosion inhibition and also aids in removal of sludge or boiler deposits and prevention of scaling in boiler tubes.

DOSAGE AND FEEDING

MURC 3302 RO pH Booster should be dosed continuously in to post RO feed water line. Exact dosages depend upon the water quality and operation parameters. Clean chem will provide technical assistance to set up optimum dosages according to your operating conditions and available dosing system in your plant.

STORAGE & HANDLING

MURC 3302 should be stored in an air tight container away from direct heat. Always store at cool & dry place.
